TEJASVI S JAIN

+91 7031590000 tejasvisjain21@gmail.com www.tejasvisjain.site https://tejasvisjain.hashnode.dev/
Gurugram, Haryana

EDUCATION

Bachelor of Engineering in Computer Engineering
Thapar Institute of Engineering and Technology
10/2020 - 07/2024 Patiala, Punjab

Class XII Non-Medical
Sacred Heart Convent School - 94.6%
07/2020 Ludhiana, Punjab

Class X
Sacred Heart Convent School - 91.4%
04/2018 Ludhiana, Punjab

EXPERIENCE

Software Development Engineer - FullStack
Awiros
01/2024 - 07/2025 Gurugram, Haryana

- Integrated auto sign-in in UVIP, facilitating seamless navigation for **1200+** daily users, enhancing platform accessibility. Revamped UVIP by fixing **50+** bugs, adding **10** functionalities, and redesigning UI, increasing user satisfaction by **30%**.
- Improved ATOM's usability by revamping frontend/backend and creating **15+** generic components, accelerating web page development **5x** while creating the generic component library to streamline the design and development across products.
- Implemented AI models SAM and OwlV2 across **3** products, reducing task completion time by **50%**, boosting operational efficiency.
- Developed Python scripts automating **10+** manual QA tasks, cutting manual work hours by **400** per month, increasing team productivity.
- Wrote **100+** JEST test cases covering JavaScript backend, ensuring **99.9%** uptime and robust production stability.

SDE - React Native
Playwise
08/2023 - 09/2023 Remote

- Refactored **100%** of React Native codebase, improving app performance by **30%**.
- Resolved **50+** critical bugs, increasing user satisfaction rating by **20%**.
- Integrated **5** APIs, expanding app functionality and reducing load time by **25%**.

PRISM
Samsung
10/2022 - 06/2023 Remote

- Increased app engagement by **35%** by developing a React Native app showcasing an on-device object detection model used by **1,000+** users.
- Evaluated **3** integration options including React Native Vision Camera, ML Kit, and TensorFlow Lite to identify the optimal solution for the project.

SKILLS

Technical

GenAI | Langchain | Fast API | React Native | Angular | React.JS | GitHub | GraphQL | CI/CD | CSS3 | Node.js | Restful APIs | GCP | Docker | Kubernetes | MySQL | Agile Development | Algorithms | HTML5 | JavaScript | Typescript | Node | CDN | Redux | Webpack | SCSS | Kafka | Next.js | Vite | Scalable Solutions | Redis | Low-Level Design | High-Level Design | Vibe Coding | Cursor | SOLID Principles | ACID properties

KEY ACHIEVEMENTS

Smart India Hackathon (2022 & 2023)
Qualified for the national hackathon from a pool of **300 teams** in college twice in 2 years

EXPERIENCE

Mobile Application Developer

FINT

08/2021 - 12/2021 Remote

- Increased user engagement by **30%** by developing a polished React Native interface aligned with Figma designs for **10+** app features.
- Created custom components from scratch following Airbnb ESLint guidelines.
- Enhanced system performance by **20%** by integrating **25+** backend APIs and optimizing navigation flows across **15** screens.
- Managed state and data storage for **15+** app modules through Redux and implemented device caching for **50MB**.
- Implemented Git version control practices across a team of **6** developers, ensuring seamless collaboration and versioning.

PROJECTS

OneFootball Scrapper

06/2025 - 06/2025

https://github.com/TEJASVISJAIN/oneFootballScraper

Technologies used: Node.js, Python, JavaScript, GenAI, Langchain, DSA

- A web scraper and summarization API for OneFootball articles. This project uses Node.js (Puppeteer) to crawl and extract football news articles from onefootball.com, and Python (FastAPI) to provide a streaming API for triggering scrapes and retrieving results. Optionally, it can summarize articles using Grok AI models.

GPS based Toll Deduction

02/2023 - 12/2023

Technologies used: Arduino, ReactJS

- Designed and implemented an alternate method for toll deduction using Arduino and ReactJS technologies.
- Reduced processing time by {30%} by innovating the toll system, eliminating dependency on FASTag.

Project Digital Laundri

11/2022

https://youtu.be/TDzTaSWn1sk

Technologies used: React Native, MongoDB, NodeJS

- Created a React Native, MongoDB, and NodeJS software solution to digitize college laundry operations.
- Reduced logistics costs by {15%} by streamlining hostel laundry routing.
- Improved operational efficiency by automating and digitizing manual laundry management tasks.

File System Organiser

01/2022

https://drive.google.com/file/d/1dI6a1Q8j7aUyxnP-y2R_3KZlzi52SUUu/view

Technologies used: NodeJS - path, OS modules

- Reduced manual file sorting time by {80%} by automating file organization into folders using custom code.

KEY ACHIEVEMENTS

Red Bull Basement Competition (October 2021)

Achieved **1st** place within the **college**, ranked **11th** in **India**, and **101st globally** (based on votes).
Recognized with the Red Bull Starter Kit for presenting the best idea at the college level

Techtronix (September 2021)

Secured the **1st** position in both the qualifiers and the overall web development track event

VOLUNTEERING

Award of Appreciation

The Mission Fateh

2021 Ludhiana, Punjab

Facilitated distribution of food packets to over 100k individuals in need during the second wave of COVID-19 in my city.

General Secretary

Linux Users Group, TIET

08/2022 - 09/2023 Patiala, Punjab

Handled projects, managed events and guided the members according to their interest in different domains of Computer Science.
